

AutoTweet needs access to some domains/URLs to work:

- "twitter.com" (<https://api.twitter.com/> AND <https://twitter.com>) for posting to twitter. Note: https is needed!!!
- "facebook.com" for posting to Facebook (pro version).
- "bit.ly" or/and "is.gd" for short url service.
- "1st-movers.com" for automatic version checks (the component checks for new versions on the server).

It is possible that your provider has restricted access to one or all of this URLs or that some firewall rules conflicts with the access to this URLs. Also it is possible that CURL access is restricted on your host. If you have problems accessing this URLs or connectivity problems please contact your admin and/or provider.
